Mission Board

The internal system for mission, vision, product and brand.

**Independence through voice.
Protection when it matters.**

V0.1 · AUGUST 2026

The system, on one page.

MISSION

Return financial agency to people excluded by digital interfaces, without asking families to surrender peace of mind.

VISION

Financial independence should not expire with age, mobility or interface complexity.

PRODUCT

A voice-first agentic financial account with a dual-user model: independence for the person using it, protection for the person who cares for them.

PROMISE

Independence through voice. Protection when it matters.

NORTH-STAR RULE

Family intervention happens by exception only.

Two users. One account. One owner.

THE END USER

**Speaks. Reviews. Confirms.
Pays independently.**

The account stays in their name. Daily use is a conversation, not a dashboard.

THE RESPONSIBLE

**Sets up once.
Intervenes only by exception.**

KYC, funding, family graph and limits happen once, before daily use.

The interface becomes a conversation.

The agent does the work. The user makes the one decision that carries consequence.

THE PROTECTION DOCTRINE

Protection intervenes only when it matters.

**The family must not approve every
payment.**

**The moment they do, independence
was not returned. It was transferred.**

SAFETY IS NEVER THE UPSELL.

Six rules that survive every roadmap.

01

Agency by default
The user owns the account, initiates actions and confirms consequence.

02

Intervention by exception
Family enters only when activity is unusual or crosses a policy.

03

Complexity stays invisible
Addresses, rails, gas and settlement never become daily-user tasks.

04

Plain language first
One action, one consequence, no forms and no crypto vocabulary.

05

Safety is universal
Core confirmation, limits, anomaly detection and protection stay free.

06

Fail closed and explain
If nobody responds, the held action expires safely and Nana explains why.

Design for the user. Acquire the responsible.

One wallet. **Two people it frees.**

THE SENIOR

Independence

- Pays their own bills
- Nobody takes over

Nana

THE FAMILY

Freedom

- Stops running their money
- Told only when it matters

Independence for one. **Freedom for the other.**

DO NOT FRAME NANA AS

**a crypto wallet · parental controls · pay-to-be-safe ·
technology simplified for old people**

WEDGE

Start with seniors and people with limited mobility.

PROMISE

Independence through voice. Protection when it matters.

PRODUCT

Say what you want. Confirm what matters.

FAMILY

Give your parents independence without giving up peace of mind.

EXPANSION

Families · minors · delegated finance

Calm for money. Warm for family.

COLOR

Nana Purple
#5639DD

Action Purple
#684CF6

Cream
#F6F1E8

Ink

Lilac
#EDE8FF

TYPE

Fredoka

Rounded display voice for the brand, claims and decisions.

Nunito

Plain, generous body copy for product and explanation.

MOTIFS

soft spheres • faint grid • glass rails • large rounded surfaces • one strong action

Nani is a calm guide, never a childish mascot.

Protect the thesis. Test the business model.

DEFINED

The product cannot change these without becoming something else.

- Dual-user architecture
- User owns and confirms
- Intervention by exception
- Safety stays free
- GTM through the responsible
- Voice-first intent-to-action loop

TESTING

LOW / MEDIUM = current confidence today, not priority or opportunity size.

These are hypotheses, not identity statements or promises.

- | | |
|-----------------------------------|--------|
| • Transaction economics | LOW |
| • Nana Family willingness to pay | MEDIUM |
| • B2B2C demand | LOW |
| • Production custody + compliance | LOW |
| • Risk thresholds + slow scams | LOW |
| • Family Graph growth loop | LOW |

Protection became control.

Financial products are built around interfaces, not people.

NANA BREAKS THE CHAIN

Protection without taking control.

The family is a graph, not a permission queue.

BANKS HAVE ACCOUNTS. NANA UNDERSTANDS FAMILIES.

Relationships carry meaning.

Responsible, alerts, trusted recipient and protected person are distinct roles, not a chain of approvals.

The graph powers

permissions · protection routing
coordination · future expansion

Own the relationship. Integrate the rails.

NANA MUST OWN

The experience and trust layer

- Product experience
- Voice agent + intent orchestration
- Family Graph + permissions
- Protection and risk experience
- Brand and user relationship

PARTNERS CAN PROVIDE

Regulated financial infrastructure

- Wallet infrastructure
- Stablecoin and local rails
- ARS on/off-ramp
- KYC and compliance infrastructure
- QR, bill payment and settlement

Nana should own the user relationship, not reinvent every financial rail.

Measure independence, not activity alone.

NORTH STAR

Financial actions completed independently that previously required assistance.

BEFORE NANA

“Send me the bill. I will pay it for you.”

WITH NANA

“Nana, pay the electricity bill.” ✓

NANA IS NOT

- a crypto wallet for crypto users
- a chatbot inside a bank app
- parental-control software
- approval for every transaction
- an interface exposing rails and gas

NANA IS

Intent turned into action with bounded human control.

Before Nana ships anything, ask:

- ✓ Does it return agency to the person using it?
- ✓ Does family intervene only when necessary?
- ✓ Does complexity stay invisible?
- ✓ Is safety available to everyone?
- ✓ Can the user understand the consequence in plain language?

nana

**Independence through voice.
Protection when it matters.**

THE QUESTION UNDER
EVERY OTHER QUESTION

**Does this return agency,
or transfer it?**
