

nana

Nana

A voice-controlled wallet built for seniors and people with limited mobility.

Independence for the user. Peace of mind for the family.

Financial apps assume everyone can tap, read and move the same way.

01

A simple transfer takes five or more taps.

Each screen adds another small target, decision and chance to make a mistake.

02

The interface excludes people who still know exactly what they want to do.

The barrier is interaction, not intent.

5

OR MORE TAPS

**MEET SUSI**

She knows what she wants to do.

Her hands make the interface hard to use.

Susi is over 70 and lives with Parkinson's. Small tap targets and unfamiliar fintech screens turn a routine transfer into a physical challenge.

Five taps can make a simple transfer inaccessible.

Small targets demand precision. A tremor turns every tap into another chance to miss.

Unfamiliar financial interfaces add cognitive effort to an existing physical barrier.

A routine transfer becomes a difficult physical interaction.

Nana wallet

A voice-controlled wallet built for seniors and people with limited mobility.

HOW NANA SOLVES IT

Say what you want to do. Nana prepares the transaction.

Voice handles the interaction. Before anything moves, the user reviews the amount, recipient and network in one clear confirmation.

- Natural voice
- One clear confirmation
- Safety by default
- Crypto in the background

A complete transfer takes one sentence and one review.

The complete transfer flow

Say it

Confirmed

CUSTODY & PROTECTION

Protection steps in without taking control away.

The user keeps authority. Nana acts inside clear limits and pauses only when a transfer falls outside the agreed policy.

WITHIN POLICY

User confirms → Nana executes

Known recipients and expected amounts stay between the user and Nana.

OUTSIDE POLICY

Nana pauses → Family reviews

A new recipient, unusual amount or configured limit triggers the exception.

The responsible person intervenes by exception, not by default.

BUSINESS MODEL

Two ways to sell the same protection layer.

Nana earns recurring revenue from families and custom infrastructure revenue from financial products that want to offer the same experience.

NANA FAMILY

**USD 15
per month**

A family subscription for added controls and shared peace of mind.

B2B INFRASTRUCTURE

**Custom
pricing**

Voice and protection infrastructure for financial products.

NANA FAMILY

\$15**per month****FAMILY SUBSCRIPTION**

Family controls for the people who are already helping.

The subscription adds a responsible person, trusted recipients, spending limits and alerts for activity that needs a second look.

- Responsible person

- Spending limits

- Trusted recipients

- Exception alerts

B2B INFRASTRUCTURE

Financial products can offer Nana without building the layer themselves.

Nana provides the voice interface, delegated permissions and protection logic that banks, fintechs and wallets can bring into their own customer experience.

COMMERCIAL MODEL

Custom pricing

Pricing is set by integration scope, product requirements and expected volume. Nana stays responsible for the product experience and protection layer.

WHAT WE NEED

The guidance and infrastructure to launch Nana safely.

01 Regulatory & legal counsel

Advice on structuring Nana's custody and protection model for a voice-controlled wallet.

02 Financial infrastructure partners

On- and off-ramps, stablecoin rails and wallet infrastructure that can support the Nana experience.

Help us make voice-led financial access safe and usable from day one.
