AGENTIC WALLET

Independence through voice.

Protection when it matters.

The agentic wallet for seniors and people with
limited mobility.

PITCH DECK · SEPTEMBER 2026

Protection today often means taking over.

When financial interfaces become difficult, families usually choose between two bad outcomes:

01

Do it for them

The person loses agency and privacy.

02

Leave them alone

The risk of error, fraud or lockout grows.

03

Add another app

More screens and passwords do not solve the real problem.

The missing option

**Act
independently.
Escalate only
when needed.**

The need is structural – and growing.

A massive population is being asked to navigate an increasingly screen-first financial life.

disability today

OUR WEDGE: SENIORS + LIMITED MOBILITY

Ask. Prepare. Confirm. Settle.

A financial action starts in natural language and ends with explicit user consent.

1 ASK

2 PREPARE

3 CONFIRM

4 SETTLE

One account. Two distinct roles.

Nana separates the person who acts from the person who can help when something looks wrong.

END USER

Acts independently

- Speaks the intent
- Reviews every consequence
- Keeps final authority

RESPONSIBLE

Helps by exception

- Receives unusual-event alerts
- Can co-approve if policy requires
- Never silently takes control

Intervention by exception – not by default.

Protection should remain invisible until a transaction crosses a clear, understandable boundary.

Normal intent flows. Unusual intent pauses.

The same simple interaction can produce two different safety outcomes.

ORDINARY

UNUSUAL

The agent can act – inside boundaries the user controls.

Authority stays with the person. Agent permissions are limited, transparent and revocable.

The first agentic transfer loop already works.

We built the core interaction, shipped a safety floor and validated the direction in public.

AGENTIC TRANSFERS

2nd

TETHER WDK HACKATHON

1

WORKING DUAL-USER LOOP

Built, not rendered

Voice input · intent parsing · explicit confirmation · receipt · unusual-event controls

Nana owns the experience and the trust layer.

Infrastructure can evolve without changing the user relationship or product promise.

NANA OWNS

The product people trust

Agent · voice UX · Family Graph · Protection Engine
policies · orchestration · user relationship · brand

PARTNERS PROVIDE

The rails beneath it

Wallet infrastructure · stablecoins · settlement
fiat rails · KYC · bill pay · liquidity

WDK / USDT · PROVEN PATH

ARC / USDC · EVALUATING

Three hypotheses. One non-negotiable.

We will validate monetization without putting the safety floor behind a paywall.

01

HYPOTHESIS

Financial activity

Revenue from transactions and embedded financial flows.

02

HYPOTHESIS

Nana Family

Paid coordination, visibility and family-level controls. Pricing unit: TBD.

03

HYPOTHESIS

B2B2C

Distribution through institutions serving seniors, families and care networks.

THE NON-NEGOTIABLE · CORE SAFETY REMAINS FREE

A focused wedge into a broader financial primitive.

Start where the cost of inaccessible finance is highest — then expand through trusted relationships.

The responsible person opens the door.

Distribution starts with the family member who already helps — without turning them into the account owner.

Acquisition by trust. Retention by independence.

A working core – and a focused validation plan.

What exists today is separated from what we need to learn next.

BUILT

Working product core

- ✓ Voice-led intent
- ✓ Agent prepares a transfer
- ✓ Explicit confirmation
- ✓ Transaction receipt
- ✓ Dual-user safety concept

NEXT TO VALIDATE

The riskiest assumptions

- Responsible-person acquisition
- Family Graph configuration
- Escalation thresholds
- Nana Family willingness to pay
- Infrastructure path by market

Four builders, one product thesis.

Product, mobile, agent flows, wallet infrastructure and voice — built together in the open.

nana

The next financial account is agentic.

It lets people act independently inside a trusted, programmable network of relationships and permissions.

**Independence through voice.
Protection when it matters.**
